

## ENKO ELEKTRONİK

### ATS-S AUTOMATIC TRANSFER DEVICE

#### MAIN MENU AND KEY IDENTIFICATION

**I Start Button:** Used to start the generator in manual mode.

**O Stop Button:** If the generator is under load, pressing this button initiates cooling. If cooling is not desired, pressing the button again will stop the device immediately. If not under load, pressing the button stops the generator directly. If Parameter 20 is active, the device enters Shutdown Mode and the above operations take place.

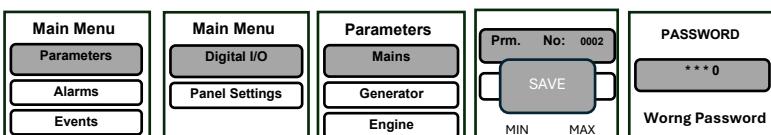

**GCB Button (Right):** In monitoring pages, used to switch the load after the generator starts in manual mode. If the mains contactor is active, it must first be deactivated with the MCB button, and then the load can be engaged with the GCB button. In menu pages, a short press acts as the Enter Button.

**MCB Button (Left):** In monitoring pages, used to switch to load when the mains values are suitable in manual mode. If the generator contactor is active, it must first be deactivated with the GCB button, and then the load can be engaged with the MCB button. In menu pages, a short press acts as the Back Button.

**Up Button:** When pressed long, the mode can be changed, with each mode indicated by a different color. When pressed short, it silences and clears alarms in the main and alarm pages

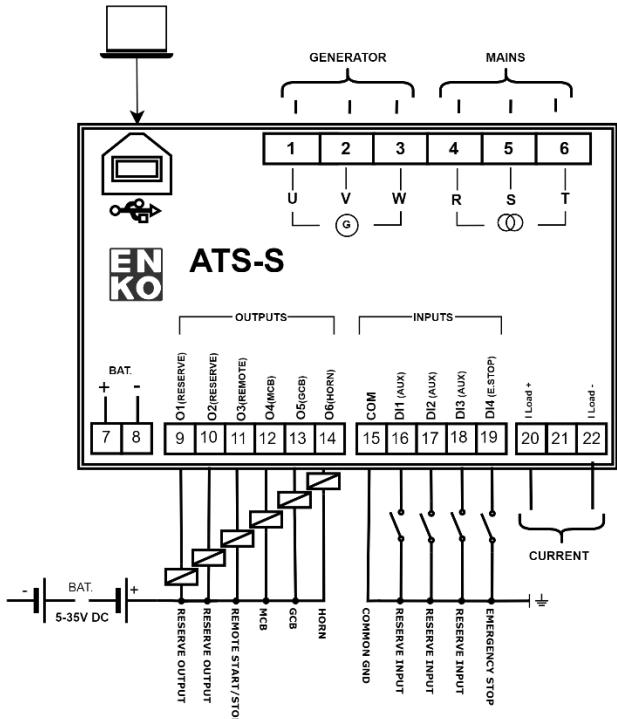

**Down Button:** When pressed long in the main pages, it enters the Menu. In menu pages, a short press is used to move downwards.

#### MAIN MENU AND USER INTERFACE

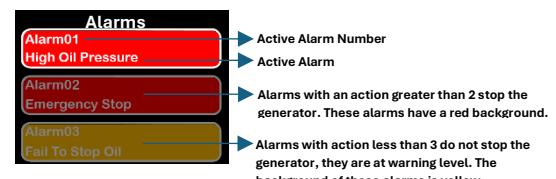

For entry, press and hold the down button for 1 second to enter the main menu. Use the down and up buttons to change the selection. Use the exit button to exit.

#### ATS-S CONNECTION DIAGRAM

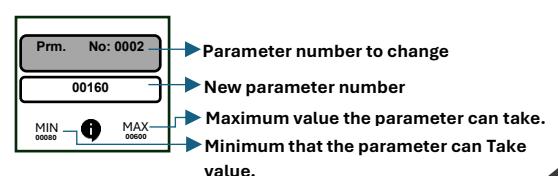

#### ACTIVE FAULTS AND FAULT RECORDS

Press the entry button to access the main menu. In the main menu, navigate to the "Alarms" section and press the entry button. Active faults are listed on this page with a red background color.

#### PARAMETER MODIFICATION

Press the Enter button from the Main Menu to access the Parameters section. Then, enter the Enter Parameter No section with the Enter button. Adjust the values you want to change using the up and down arrows, and the left and right arrows for digit positioning, and confirm with the Enter button. To exit the menu without entering parameters, press the Exit button.

## PARAMETERS

	P.	PARAMETER DESCRIPTION	UNI.	L	MİN.	MAX.	DEF		P.	PARAMETER DESCRIPTION	UNI.	L	MİN.	MAX.	DEF

- NOTE: If the menu exit time has elapsed since the last entered password, the password screen is displayed. It is requested to enter the password again.
- NOTE: Errors and alarms received while in the main menu are reset, but they are not removed from the main screen as information. When the main screen is reached, reset button is pressed again.
- NOTE: In test mode, when the start button is pressed for the first time, the genset is started, but if it is pressed for the second time, the genset feeds the load.
- NOTE: In the event of a fault or warning, the warning symbol is displayed in the lower right corner of the screen and the status bar flashes red and blue depending on the level of the fault.
